INDEX.

Adie, Alexander, civil engineer, on the expansibility of stone, 207
Agassiz, Professor, his observations on fishes, 331
Air, notice of the effect of mountain, on man, 191
Andrejewskyi, Dr, on the vegetables which are found in the mineral waters of Abano, and in their immediate vicinity, 261
Aphis persicæ, notice on the, 188
Arago, M., on the number of comets in the solar system, &c. 15—on the Egyptian hieroglyphical writing, 39
Arch, Dr Traill on the history of the, 203
Arts, Proceedings of the Society of, 214—Report of the Committee on Mr Beattie's spring door, 313—Mechanical science applied to the, 370
Association, British, at Dublin, proceedings of, 353

Babylon, Dr Traill on the ruins of, 206
Beattie, Alexander, his description of a new spring for shutting a door, 309
Beck, Lewis C., his researches on wines and other fermented liquors, 145
Birds, on the respiration of, 193
Boussingault, J. B., his account of an attempt to ascend Chimborazo, 88
British plants, new and rare found in Scotland, 348

Carpet manufacture, Mr Edward Sang on the recent improvement of the, 254
Chemical and Mineralogical Section of the British Association, proceedings of the, 391
Chimborazo, M. J. B. Boussingault's account of an attempt to ascend, 88
Ciliary motions in reptiles and warm-blooded animals, account of, 114
Clark, Dr, on the application of the hot blast in the manufacture of iron, 205
Comets, M. Arago on the number of, in the solar system, &c. 15—on the light of, and on the means of deciding whether this light emanates from these bodies themselves, or is borrowed from the sun, 21—on the, which will pass its perihelion in Nov. 1835, 31
Connell, Arthur, Esq., on the action of voltaic electricity on alcohol, ether, and aqueous solutions, 159—on taking the Dew-point, 176—on the chemical nature of fossil scales, 300

Copper, native, notice of a large mass of native, 183
Craig, Rev. Edward, on the measurement of the angles of minute crystals, 306
Cunningham, R. J. H., his remarks on the geology of Skye, 208

Daubeny, Charles, M. D., on the degree of selection exercised by plants, with regard to the earthy constituents presented to their absorbing surfaces, 164
Davy, Dr, observations on Faraday's Experimental Researches, 317—on the temperature of fishes, 325
Dew-point, note on the taking the, directly, by the method of Leroi and Saussure, 177
Deluges, Dr Von Schubert on the, of Deucalion, Oxyges, and Noah, 34
Don, David, Esq., on the characters of certain groups of the Personatæ, 108

Earth, temperature of, 143
Earthquakes, notice of, 184
Electricity, velocity of, 179—A. Connell, Esq., on the action of voltaic, on alcohol, &c. 159
Expedition, projected, to Iceland and Greenland, 196

Fish, Dr Fleming's notice of the remains of a, found in coal, 364
Fishes, Mr Parnell's account of some new, found in the Firth of Forth, 209—Dr John Davy on the temperature of fishes of the genus Thynnus, 323—Agassiz on, 331
Fleming, Dr, on the remains of a fish found in connexion with a bed of coal at Clackmannan, 314
Forbes, Professor, his notice respecting the application of the compressibility of water to practical purposes, 36
Formations, Dr Gairdner, his sketch of, 8

Gairdner, Dr, his physico-geognostic sketch of the island of Oahu, 1
Geological and geographical section of British Association, proceedings of, 374
Gold region of the United States, 185
Graham, Dr, on several new or rare plants which have flowered in the Botanic Garden, Edinburgh, 202—his list of plants new to the British Flora, or rare in Scotland, 348
Greenland, projected expedition to Iceland and, 196

Hailstones, Dr L. Cosaire, his acconnt of some remarkable, which fell at Padua, 83

Jameson, Professor, on the birds of the Himmalayan mountains, &c. 208—on a new species of eagle, and notice of the male Lophophorus Nigelli, 212—on new species of Ibis, Tanagra, and Rubecola, 213

Lawrie, Mr James, on the different chronologies of the deluge, 311

M'Nab, Mr James, his account of some of the rarer plants observed during an excursion in the United States and the Canadas in 1834, 56

Mammoth, on the discovery of the remains of the, in India, 196
Martin, Mr G., on the Glasgow and Garnkirk Railway, 48
Mathematical and physical section of British Association, proceedings of, 354
Marcet, M. F., his inquiry into the changes which the atmosphere undergoes when in contact with certain vegetables which are destitute of green leaves. 302
Medical Section of the British Association, proceedings of the, 408
Meetings, evening, in the Rotundo, 416

Nests, edible birds', how formed, 190

Oahu, Dr M. Gairdner, his physico-geognostic sketch of the island of, 1
Observatory, account of the founding of a new grand, for the Russian empire, 71

Parnell, Mr, his account of some new fishes found in the Firth of Forth, 209
Patents, list of, granted in Scotland from the 25th Sept. 1834 to 10th June 1835, 217—from 12th June to 19th Sept. 1835, 436.
Pilot fish, notice of the, 180
Plants, notice of fossil marine, 184—List and description of rare plants flowering in the Botanic Garden, 202—list of, new or rare to the British Flora, 348—Mr J. M'Nab, his account of the rarer plants observed during an excursion in the United States and Canadas in 1834, 56—Dr Daubeny on the degree of selection exercised by, 164
Purkinge, Professor, and Dr Valentin, their discovery of continual vibratory motions produced by cilia, as a general phenomenon in reptiles, birds, and mammiferous animals, 118

Railway, Mr G., his remarks on the Glasgow and Garnkirk, 48
Rogers, H. D. Esq., on the Falls of Niagara, 281
Royal Society of Edinburgh, proceedings of the, 203
Rubecola Tytlerii, Professor Jameson's notice of the, 214

Salmon of the Columbia river, 192
Sandstone, on the imprint of feet of animals upon red, 182
Sang, Ed. Esq., on the manner in which friction affects the motion of time-keepers, 129—on the recent improvements of the carpet manufacture, 256
Scales, A Connell, Esq., on the chemical nature of fossil, 300
Schubert, Dr Von, on the periods of the deluges of Deucalion, Oxyges, and Noah, 34
Sharpey, Dr, his account of the discovery, by Purkinge and Valentin, of ciliary motions in reptiles, &c. 114—additional observations and experiments, 125

XUM

Serres, M. Marcel de, his remarks on the question, Does the observation made in the coal-mines of Canada and of Baffins announce a change in the Ecliptic? 64—on the distinctive characters of the dog, the wolf, and the fox, 244
Statistical Section of the British Association, proceedings of the, 412

Temperature, progressive increase of the, as we descend in the crust of the earth, 143
Time-keepers, on the friction of, 129
Traill, Dr, on the history of the arch, 203—on the ruins of Babylon, 206

Wernerian Natural History Society, proceedings of the, 208
Wilson, James, Esq., on the insects of Sutherlandshire, 212–292
Wines, L. C. Beck, M. D., his researches on, &c. 145
Writing, M. Arago on the Egyptian hieroglyphical, 39

NOTICE TO CORRESPONDENTS.

Owing to the great length of the Account of the Meeting of the British Association at Dublin, Communications, Notices of Books, &c., are unavoidably delayed until next Number.

We regret exceedingly that Mr HARDY's ample and excellent Report of the Proceedings of the British Association in Dublin, did not reach us until the last sheet of our Journal had passed through the press.

PRINTED BY NEILL & CO., EDINBURGH.
